

Product Description

SPA3 Investor is a mechanical investment system used by self-directed investors targeting an annualised return of 5% above the ASX200 Accumulation Index (XJOA) over rolling periods of 5 years through a long equities trend-following and cash strategy. E.g. 15% annualised return if the XJOA achieves 10% annualised. While taking similar risk to a Managed Balanced Fund as measured by Maximum Drawdown.

Model Portfolio Description

This model portfolio executes the SPA3 Investor mechanical trend-following system exactly according to the documented rules of the SPA3 Investor ASX EW Portfolio Investment Plan with the Founder's own money.

GARY STONE

Portfolio Manager

gary.stone@sharewealthsystems.com

How it Works

Systematic Buy and Sell signals, which are the result of 5000+ hours of research, are provided via the SPA3 Investor Alerts App and via the SPA3 Investor Technical Analysis software.

Manage your own Portfolio of between 5 and 15 large-cap stocks, depending on Portfolio size, using your own online broker. Maximise exposure of your Portfolio to stocks according to the Buy signals.

When a Sell signal occurs, exit the position on the following trading day, and fill that vacant position in your Portfolio as soon as another SPA3 Investor Buy signal occurs.

During volatile down markets it is possible for your Portfolio to be 100% in cash.

Following this process should take less than an hour a week of your time. On average, you will complete approx 3.0 trades a month (where 1 trade is both a buy and sell transaction).

General Disclaimer

Before making an investment decision on the basis of computer software, the investor or prospective investor needs to consider, with or without the assistance of a securities adviser, whether the advice is appropriate in light of the particular needs, objectives and financial circumstances of the investor or prospective investor.

Investments can go up and down. Investors and prospective investors need to recognise that past returns are not a reliable indicator of future returns. Investing in quoted securities involves numerous risks including but not limited to market risk, sector risk, company risk and liquidity risk. Investors and prospective investors should ensure that they understand the risks involved and have strategies to manage and minimise the negative impact that these risks may cause. If you have any questions, please contact Share Wealth Systems.

In providing the computer software packages, Share Wealth Systems does not take into account the investment objectives, financial situation and/or needs of any particular person.
